

# AUSTRALIAN EHEALTH CONNECTIVITY FOR **WEBPAS**

## KEY FEATURES

### INDIVIDUAL HEALTHCARE IDENTIFIER (IHI) LOOKUP

Facilitate lookup of patient's IHI based upon webPAS demographics

### MY HEALTH RECORD VIEWING

Browser-based viewer allowing authorised users to view a patient's My Health Record, launched directly from webPAS

### MY HEALTH RECORD UPLOAD

Discharge summaries generated in webPAS are uploaded to My Health Record as Type 1a Discharge Summaries

### HYBRID DEPLOYMENT OPTIONS AVAILABLE

On-premise at a client site, or cloud hosted by Dedalus

### AVAILABLE NOW

NIHC has been granted Production Access to the Health Identifiers Service and the My Health Record.

## NIHC – NATIONAL IDENTIFIERS AND HEALTHCARE CONNECTOR

The Australian Commission on Safety and Quality in Healthcare's Advisory AS18/11 advises healthcare organisations on providing clinical information into the My Health Record system.

The Dedalus NIHC component simplifies connectivity to the national eHealth infrastructure by integrating it into the user's workflow within webPAS. Patient IHI lookups are performed in real-time within the application.

Designed to support hospital accreditation requirements, discharge summaries created within webPAS can be uploaded to My Health Record with Clinician and Author Healthcare Provider Identifiers (HPI-I) included. Document management functions including upload, revoke and supersede are available with a full audit trail provided.

Authorised users are able to launch the NIHC My Health Record viewer in the context of their user and patient, allowing simple access to the patient's My Health Record without having to re-enter data.

This functionality is available for deployment across existing webPAS implementations (v11.04 and above), either on-premise or as a Dedalus cloud hosted offering.

NIHC is an active product offering from Dedalus and includes an ongoing roadmap for additional features.
